

AQUAMARINE

Aquamarine is the blue or blue-green member of the beryl family of gems. Gem grade aqua comes from many places around the world: the USA, Brazil, Madagascar, Nigeria, Pakistan and Vietnam and Afghanistan. The blue aqua from Mt. Antero, Colorado ranks among the finest.

It is the 26th highest peak in North America at 14,226 ft. It is a spectacular mountain and yields a variety of minerals to a lucky few who are willing to risk serious illness or death from altitude sickness, hypothermia, deadly lightning, and rock slides; it will kill you in a heartbeat if you are careless! If you decide you want to collect, then at the very least, read Jacobson's book on Antero and hiring a local guide will save you a lot of time and money! Do NOT collect on someone's claim!!

Our first trips were in the '80s and the "road" up there was a challenge even for a Jeep! We felt a real sense of accomplishment just to get to the top of the switchbacks. We still had empty pouches coming down.

Antero recently became well known through a TV show about the Antero prospectors. The show can make you think it's easy to just run up there and start picking up crystals. I can tell you firsthand, that every aqua crystal that comes from Antero, has been found with hard work and lots of luck.

One of the most important things to remember if you do make it, is to take a break, turn around and look where you're at. The incredible scenery is what it is really all about -- the rocks are just a bonus from the Good Lord! A couple of photos are shown here from some of our past trips.

Evening shadows march down Chalk Creek Canyon. Mt Antero is the last 14,000 ft peak in the Sangre de Cristo range. On the right are the Chalk Cliffs of Mt. Princeton, first 14teener in the Collegiate Range.

Top left: Mt. Antero switchbacks looking north from 'the saddle'. The last two trees at timberline are on the left.

Right: Brian's claim. Small figure at outcrop is one of Brian's sons. Two of my rockhound friends are several hundred ft below screening for aqua crystals.

Left: Rick on Mt. White. A 1000 ft dropoff is behind me and distant valley leads south to Salida, Colorado.

Below : The aquamarine monster specimen named "Dianne's Pocket" was found a few years ago on Antero and is now in the Denver Museum of Natural History.

Bottom left: One of Rick's aquas in a "Zinger Cut" now in a private collection. Facet rough and mineral specimens are listed below.

Aquamarine Facet Rough and Specimens

Our faceted gems are currently sold out. Orders for custom cuts are welcome. We have aqua rough from various locations and some very special facet grade crystals from Mt. Antero. Also specimens and a few smokeys are soon to be listed.

For gem collectors interested in Mt Antero, we have one copy for sale of Mark Jacobson's book "Antero Aquamarines", 1993 edition which is now out of print. It is a must have for Antero Aqua lovers and prospectors. Check out the gem and mineral books now on sale.

Aquamarine crystals - Facet rough Grid squares are approx 3/4 inch or 19 mm

Top row

1.	Brazil	94.79 ct	47 x 14.7 mm.	Etched bottom.	approx 18 mm cuttable.	\$220 SOLD
2.	Pakistan	84 ct	50 x 13 mm	matrix bottom	approx 35 mm cuttable	\$120
3.	Madagascar	58.55 ct	35 x 12.5 mm	matrix bottom	approx 15 mm cuttable	\$150
4.	Pakistan	40.7 ct	39 x 9.8 mm	very clean xyl	approx 29 mm cuttable	\$90

Second Row

5.	Brazil	54 ct	44 x 12 mm	etched bottom	approx 14 mm cuttable	\$160
